Amendments to the Claims

The listing of claims presented below replaces all prior versions, and listings, of claims in the application.

Listing of claims:

1. (currently amended) Image plus event information printing system, which comprises:
 - an image data inputting means for inputting a datum of original image,
 - an event information database which memorizes the data of ~~social~~, current and/or passing social events information being sorted with two or more items, wherein one of the items consists of the occurrence time of the event, and another one of the items consists of genre of the event,
 - an event genre selecting means, wherein a genre is selected from genres of event information,
 - an event information retrieval means for extracting any event information in the selected genre within a predetermined range being in correlation to the time which is related to the original image, by retrieving from the sorted data in the event information database with using one or more of the items,
 - an image editing means for preparing a datum of an image plus event information, from the datum of original image and the extracted event information, and
 - a printing means for printing the image plus events information in accordance with the datum prepared by the image editing means.
2. (original) Image plus event information printing system according to Claim 1, wherein the time which is related to the original image is the photographed day of the original image.
3. (original) Image plus event information printing system according to Claim 1, which further comprises an event information selecting means, wherein one or more events information are selected as user's pleases from the retrieved events information when two or more events information are retrieved from the sorted data at the event information retrieval means, and thereby, the image editing means prepares the datum of the image plus event information,

one of the items consists of the genre of the event,

an event genre selecting means, wherein a genre is selected from genres of event information,

an event information retrieval means for extracting any event information in the selected genre within a predetermined range being in correlation to the time which is related to the original image, by retrieving from the sorted data in the event information database with using one or more of the items, and

a transmission means for transmitting the retrieved data to the terminal or server capable of editing the image.

8. (original) Server according to Claim 7, wherein the time which is related to the original image is the photographed day of the original image.

9. (original) Server according to Claim 7, which further comprises an event information selecting means, wherein one or more events information are selected as user's pleases from the retrieved events information when two or more events information are retrieved from the sorted data at the event information retrieval means.

10. (currently amended) Server which is connected to a terminal via line and transmits to the terminal a datum of image which is synthesized herein, which comprises:

a receiving means for receiving a datum of original image,

an event information database which memorizes the data of ~~social~~, current and/or passing social events information being sorted with two or more items, wherein one of the items consists of the occurrence time of the event, and another one of the items consists of the genre of the event,

an event genre selecting means, wherein a genre is selected from genres of event information,

an event information retrieval means for extracting any event information within a predetermined range being in correlation to the time which is related to the original image, by retrieving from the sorted data in the event information database with using one or more of the items, and
